

AIRUS

BATTLE PROVEN BLADDER RELIEF

Flown in combat, qualified to the standard, and trusted by
aircrew who can't afford to stop hydrating

The Only In-Flight
Relief System Fielded
in **Air and Space**

THE AIRUS SYSTEM

Modular. 3D Printed. Customizable.

A 3D printed gender-specific interface, worn under the flight suit, connects to a hand controlled pump that evacuates fluid at 3.4+ LPM into a discreet, sealed collection bag. For every pilot and aircrew member male or female.

INTERFACE	5 FEMALE • 2 MALE
PUMP	3.4+ LPM
CONTROLLER	40 MIN • REMOVABLE BATTERY USB-C CHARGING • NVIS LEDS
COLLECTION	1800 ML (2200 ML EMERGENCY)

WHY AIRUS EXISTS

Tactical Dehydration is taken at the expense
of health, focus, and mission success

92.6%

OF FEMALE PILOTS
TACTICALLY DEHYDRATE

-50%

G-TOLERANCE LOSS
AT 3% DEHYDRATION

692 mL/hr

AVERAGE IN-FLIGHT
FLUID LOSS - TACAIR

Everything, in one kit.

CLEARED FOR PROCUREMENT

COMBAT PROVEN

"When I tell you this device has changed my entire career, I mean that wholeheartedly. I completed the rest of our deployment able to drink coffee and electrolytes and be a HUMAN again. It was amazing."

- F-16 PILOT

FROM THE COCKPIT

"First time in 15 years of Air Force flying that I could pee in the aircraft. I'm a prime example of tactical dehydration and want it immediately so I can continue flying safely and hydrating."

- F-15 PILOT

LONG SORTIE

"I forgot I was even wearing it — first time I've flown a long sortie without thinking about it once."

- F-22 PILOT

Now live on GSA.

NOBODY CRACKED IT

"The piddle pack was always the worst part of a long sortie. AIRUS is quick, it's comfortable, and it doesn't leak — that's all I ever wanted and nobody had cracked it until now."

- F-15 PILOT
